8.5 X 11"**

The objective is to setup the layout or geometry of the report so that when it is printed on either A4 paper or letter paper, the report can be printed at actual size (100%) without truncating any of the image area and without having to resort to select a "fit to page" option in the print dialogue.

This can be achieved by constraining the total image area (header, footer, text area, graphic area) to a height of 297mm and a width of 190mm. This provides top and bottom margins of 10mm and left and right margins of 12mm—well within the image-ble area of most laser and inkjet printers. The PDF page size must be 8.5 x 11".
